Post-2020 deforestation evidence
JRC GFC2020 is used here as a 2020 forest-baseline layer. Post-2020 disturbance layers are intersected with the baseline forest mask to estimate whether forest disturbance occurred after the EUDR cut-off date. The reporting period is resolved from the latest available evidence datasets and may not equal the current calendar year. These metrics do not by themselves establish EUDR deforestation, because EUDR deforestation also requires conversion of forest to agricultural use. Agricultural or commodity-conversion evidence is therefore reported separately.

n/a

n/a

Evidence gap: temporal coverage is unavailable or provider/geography-dependent.

sentinel_confirmation

n/a

n/a

Evidence gap: temporal coverage is unavailable or provider/geography-dependent.

Evidence gap

Agricultural conversion evidence missing.

Disturbance evidence is not the same as agricultural conversion evidence.

Conflict register

No dataset conflicts declared.

Warnings

This public bundle predates full optional-layer computation; TMF, RADD, Sentinel confirmation, and agricultural-conversion evidence are shown as explicit evidence gaps.

Limitations

GFC2020 is not a legal determination.

Tree-cover loss is not automatically EUDR deforestation.

Conversion to agricultural use must be supported by additional evidence.

Dataset conflicts must be exposed, not hidden.

The report is an evidence report, not a compliance certificate.

The evidence period depends on dataset availability and may lag the current calendar year.
